

My Professional Record

Curriculum Vitae

Daniel Cheeseman

AI-Assisted Full Stack Developer

Manchester, UK | daniel.cheeseman6@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Innovative **AI-Assisted Full Stack Developer** with over 8 years of experience in Application Support, FinTech, and SaaS environments. I specialize in leveraging advanced AI tools (Gemini CLI, Conductor, Cursor) to build complex technical products with high velocity. My workflow demonstrates how AI agents can enable rapid product delivery, transforming deep expertise in API troubleshooting and service management into production-grade software development.

TECHNICAL SKILLS & AI TOOLKIT

- **AI-Assisted Development:** Gemini CLI, Conductor Methodology (Spec-driven development), AI-driven code generation and architectural decomposition.
- **Development:** React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS.
- **Backend & APIs:** Node.js, Express, RESTful APIs (Postman), JSON/XML, Webhooks, SQL.

- **Infrastructure:** Microsoft Azure (Admin), Docker, AWS (Basics), Windows Server, VDI.
 - **Methodologies:** ITIL (Incident/Problem/Change), Service Design (SABSA/NIST), Technical Writing.
-

FEATURED AI-DRIVEN PRODUCTS (Demonstration of Capability)

The following projects illustrate my ability to build diverse, AI-accelerated technical products using the Gemini CLI and Conductor.

Portfolio Site Migration | [GitHub](#)

Lead Developer

- Migrated this portfolio from static HTML to Next.js 15+ using a fully AI-assisted workflow.
- **AI Impact:** Used Conductor to scaffold, implement, and verify every task, demonstrating the speed and reliability of AI agent-led development.

PSP-Lab | [GitHub](#)

Lead Developer (WIP)

- Architecting a laboratory for Payment Service Provider integrations using the Gemini CLI for rapid logic generation.
- **AI Impact:** Reducing manual coding effort by using AI to generate complex payment state machine logic and validation layers.

Security Service Decomposition | [GitHub](#)

Architect & Developer (WIP)

- Managing the transition from monolithic to microservice architecture using Conductor's spec-driven framework.
 - **AI Impact:** Mapping secure service boundaries aligned with NIST and ITIL principles through AI-driven architectural analysis.
-

PROFESSIONAL EXPERIENCE

Security Service Owner & Technical Writer | University of Manchester

Sept 2024 – Present (Remote)

- Designed the university's first Security Service Catalogue, mapping 12 core security applications to the NIST CSF framework.
- Overhauled the documentation operating model to ensure 24/7 support readiness for security incidents.

Senior Client Support (Team Lead) | Total Processing

Aug 2022 – Dec 2023

- Provided 24/7 on-call support for critical payment infrastructure, managing high-pressure outages for Platinum-tier clients.
- Developed a trend analysis dashboard that successfully increased transaction approval rates from 76% to 93%.

Sr. Systems Engineer | Bank of America

Dec 2020 – Apr 2022

- Technical lead for a critical infrastructure migration of 500+ users to a new VDI environment.
- Authored core Standard Operating Procedures (SOPs) that significantly improved global Service Desk consistency.

IT Service Desk Analyst | Parliamentary and Health Service Ombudsman

Sept 2020 – Dec 2020

- Managed user access and service health via Azure Portal, executing technical runbooks for cloud-based application support.

EDUCATION & CERTIFICATIONS

- Career Essentials in Generative AI | Microsoft & LinkedIn

- **BTEC National Diploma in ICT | Stockport College**
 - **ITIL Foundation Certification**
 - **SABSA Security Architecture (Basics)**
-

HOBBIES & INTERESTS

Futurology, Astronomy, Tech Trends, and AI-Assisted Creativity.
